

The DT4000 TruckPC™ from DriverTech.

Increased Flexibility. Decreased Costs.

The DriverTech DT4000 TruckPC™ is an innovative solution designed with a full range of services that will meet your needs today and tomorrow. Manufactured to robust, military-grade specifications, the TruckPC is a powerful Windows® XP Embedded onboard computer with open architecture to allow for an abundant selection of state-of-the-art applications that can be easily integrated for complete workflow management. And, as the industry's only tri-mode solution, it offers more cost-efficient messaging and better coverage than any alternative available—including traditional satellite-based systems.

TruckPC

DRIVING COMMUNICATIONS COSTS DOWN

"It's no longer a question of whether to invest in on-board communications and tracking systems, the question is how to reduce the monthly communications bill as well as how to leverage additional applications to fully embrace the savings available."

George Payne

CEO, Interstate Distributor Co.

Reduce Messaging Costs

A true tri-mode system, the TruckPC connects satellite, cellular and Wi-Fi networks simultaneously and then uses an algorithm to automatically route data via the lowest-cost option. Many of our customers are seeing a tenfold decrease in their satellite messaging costs, as up to 98% of their messages are now transmitted over the lower-cost cellular and Wi-Fi networks.

Improve Asset Utilization and Fleet Maintenance

The TruckPC automatically provides J1708 and J1938 engine fault codes and ECM information to your maintenance department, helping you keep your trucks at peak efficiency and on the road. Reviewing driver performance metrics—such as excessive speed, RPMs and idle time—gives you and your drivers the power to make sure they're driving smart and safe.

Reduce Fuel Consumption

DriverTech's system optimizes fuel utilization with applications that reduce "unaccounted" miles by keeping drivers from getting lost—ensuring peak operating performance of both your drivers and trucks and alerting you to sudden fuel loss.

Improve Driver Productivity and Customer Satisfaction

In-cab document scanning and printing means drivers can work more efficiently and save you money. Integrated GPS and nationwide street-level mapping helps drivers get to where they need to be on-time, making you and your customers happy.

Improve Driver Satisfaction

With "managed" in-cab Internet, email and instant messaging, drivers can keep in touch with both work and family. Media playback and entertainment capabilities let drivers easily and conveniently access a multitude of services.

Increase Your Bottom Line

By leveraging the bounty and breadth of features and capabilities available through the DT4000, you will bring increased satisfaction to your customers and increased profitability to your business by improving driver performance, asset utilization and the overall efficiency of your fleet.

- Rugged design (IP67)
- 40 to 80 GB hard drive
- Nationwide street-level mapping with on-board GPS
- Integrated high-speed Internet, Email and Instant Messaging*
- Video camera compatible
- Over the air file transfers
- Real-time fault codes and engine diagnostics
- Integrated RFID tags and readers
- Movies, games and entertainment console*
- Real-time fuel optimization integration
- Night vision and blind spot camera ready
- DTTS compliant
- Automatic driver logs
- Satellite tracking
- Color touch screen
- 3-year warranty available
- Turn-by turn, text to speech navigation
- Onboard scanning and printing
- MPEG video player ready
- Over the air software upgrades
- Real-time traffic and weather reporting*
- Integrated handheld device with signature capture*
- Barcode reader and in-cab scanning enabled
- 4 USB and 3 serial ports
- Automatic state fuel tax reporting
- CDMA, GSM compatible
- Two-way messaging
